

## What is Infertility?

It is the failure to conceive, after 12 months or more of unsafe or purposed intercourse. It is also to be recognized that in childless couples, the capacity for fertility may have reduced but not necessarily lost. If the age of the woman is 35+, she must consider a consultation with a qualified infertility specialist for research and treatment. For women of 40 & above, research and treatment should begin, not more than 3 months of trying natural methods. Females with a history of gynecological difficulties or husbands with low sperm count must see a professional as soon as possible.

## What is IVF?

In Vitro Fertilization is an assisted reproductive technology (ART) commonly referred to as **IVF**. **IVF** is the process of fertilization by removing eggs, retrieving a sperm sample, and then manually connecting an egg and sperm in a laboratory dish. The embryo(s) is then transferred to the uterus.

## How is the IVF procedure Done?

When an ample number of the woman's follicles are ready, a transvaginal ultrasound-guided egg retrieval (egg aspiration) method is performed to remove the eggs from the follicles. At our IVF Centre, the average span of the egg retrieval procedure is under 10 minutes, with a limit of about 2-15 minutes.
